Introduction

Alpha-400 is a low cost broadband access terminal for today's world of communications convergence and digital multimedia entertainment. It provides multimedia entertainment, High-speed Broadband Internet Access, and Work on the go! Equipped with various functions, such as Electronic-Book, MP3 Player, Game Player, enlarged PDA, and common business software such as Web browsing, word processing, spreadsheets and more. This unique design FULL-FLASH desktop, is perfect for the light business traveler, student, and every kid wanting to enjoy the experience of exploring the world of broadband multi-media!

The best way to learn to use your new product is to Play and Experiment, and refer to the online help and web links provided!

Product Features:

- 7-INCH High resolution TFT-LCD Digital Screen
- True Color Image Display
- Broadband Internet Access
- Linux Operating System--High Security & Virus Free
- Various Xiptech Application Packages

Companion while relaxing or having fun!

- Internet Surfing, Info Searching and News Reading
- On-line Communicating with friends, family and colleagues
- Movie and Music Download and Play
- Flash Movies and Games
- Various Simulation Games
- Fun Pictures and Photos Sharing

Office Helper on the go, with lot of software tools:

Really Efficient!

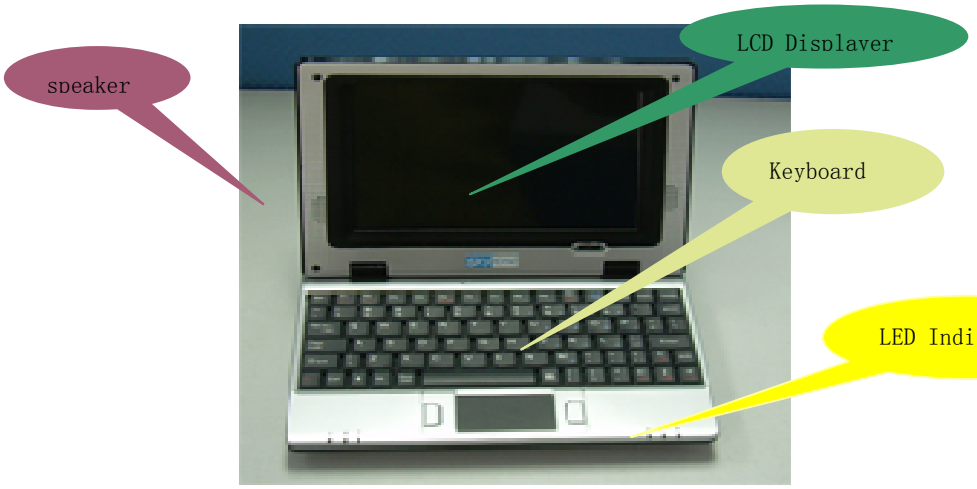
- Office Software Package: (calendar, word processing, spreadsheet, dictionary)
- Email Management
- Daily work Planner
- PDF Viewer

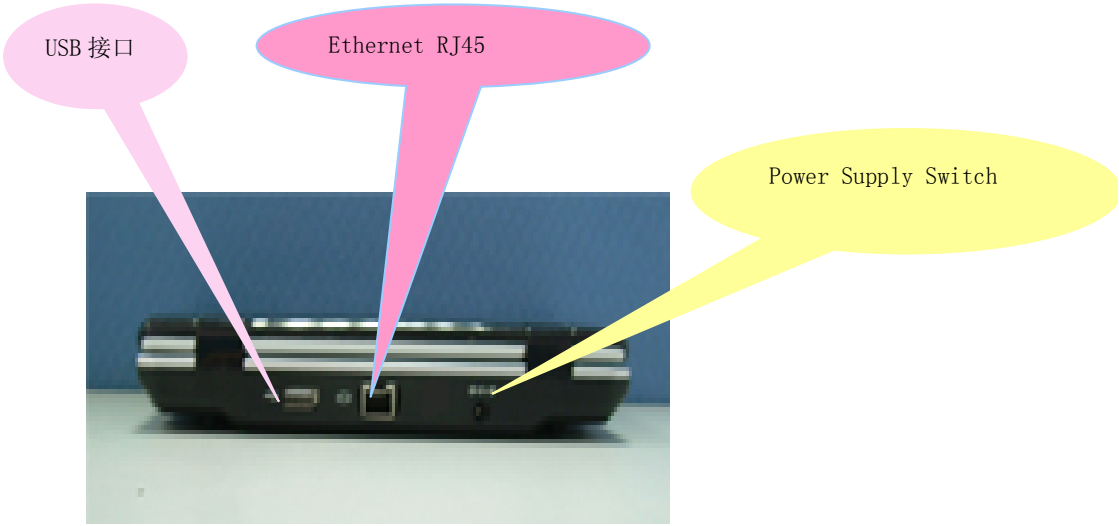
System Highlights

Alpha-400 employs Embedded Linux as the operating system. With its excellent functionality, adaptability and robustness, Embedded Linux Operating System provides a stable working and software running environment

Hardware Summary

Processor	MIPS 400 MHz 32-BIT CPU
Display Terminal	7-INCH 800x480 COLOR TFT LCD
Sound Card	AC97Voice Card
USB Port	Multiple Extended USB Ports
Input	Standard Keyboard and Mouse
Communication Device	10/100MB Ethernet port, Wireless LAN Adapter（optional）





Software Usage Guide

Turn on the Alpha-400 by switching the On/Off switch.

（1）、Web Browsing Usage

Mozilla Firefox is a free and open-source browser, which promises a better web experience. User can open a few windows without limit. Enjoy browsing, on-line video, viewing pictures and documents etc. on the web.

1、”Double click” the “ Web-browsing” icon to turn on the web Browser, see browser window below in diagram 1.

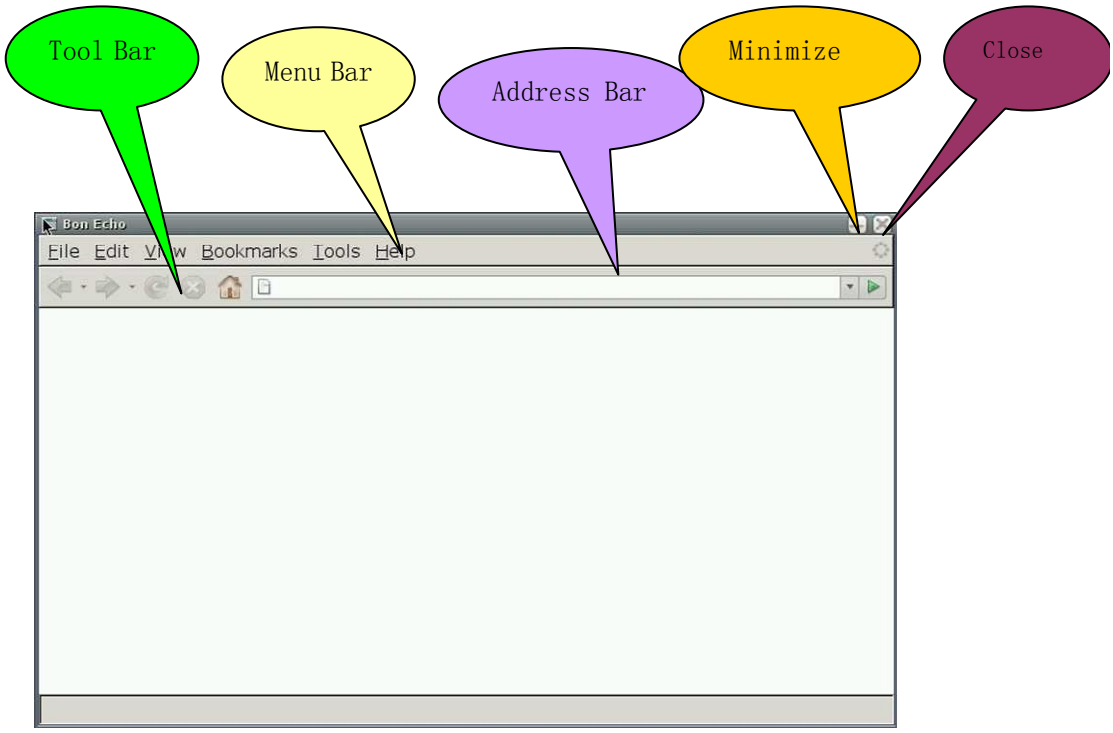


diagram 1

2. Input the website address to the Address bar, for instant http//www.google.com to open Google webpage, as shown in diagram 2

Diagram 2

3．User can open more than one WebPages. But only the current webpage will be shown in the screen. Select “file ”in menu bar → new tab to open new screen. Use mouse to click on various icons to switch among the WebPages，as shown in diagram 3

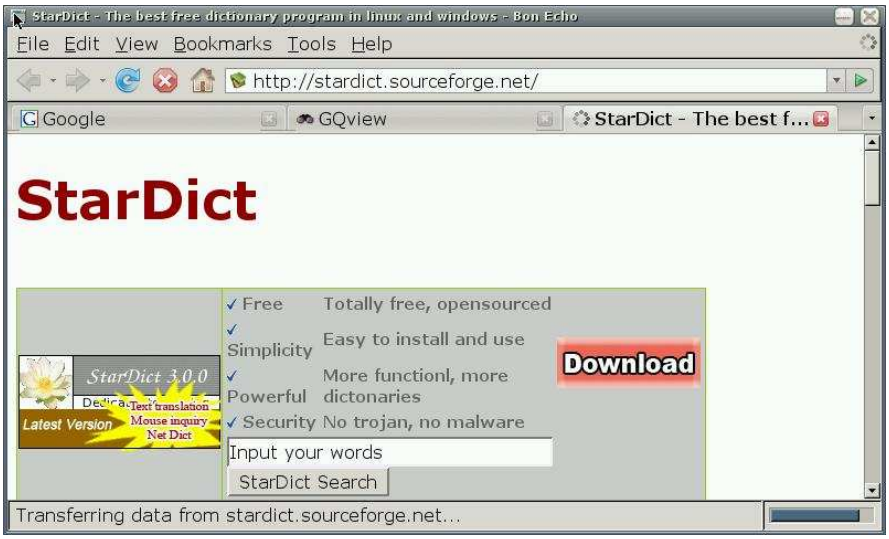

Diagram 3

Select “file” in menu bar → close tab to turn off the WebPages.

Select file → Close window option to close Web Browsing window.

4．Select menu bar File → “Save page as” option to choose your favorite webpage and save the way you choose.　As in diagram 4.Input the saved file name, select save icon. Click

button to save.

Diagram 4

5．User can print the chosen webpage. Select menu bar → “print” option to show printing set up. Click “print” to print the webpage.

6. As web browsers save personal information, you can clear this info by : Select menu bar tool → “clear private data” option, pop up screen as in diagram 5 ,select clear data – Click Clear Private Data Now button to clear personal information.

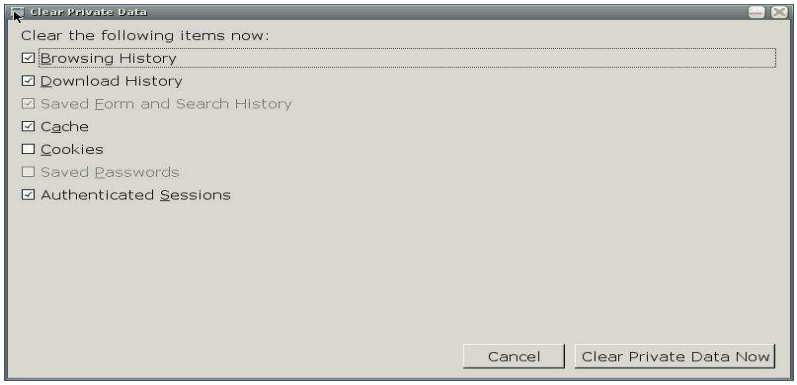

Diagram 5

7. Web Browsing bookmark management is similar to common browsers, but it is more powerful. Select “bookmarks”->“organize bookmarks will turn o the bookmark manager. User can add the current webpage as a bookmark and manage all the bookmarks etc. User can experience the functions by experimenting.

8. User can play flash files through the web Browser. When browsing the web, it can display the flash move on the webpage. Turn on the on-line flash file by clicking the flash file, as shown in Diagram 6.

Diagram 6

9. User can select Help from the menu bar : help—>help contents option to get the help information of the web browser as shown in Diagram 7.

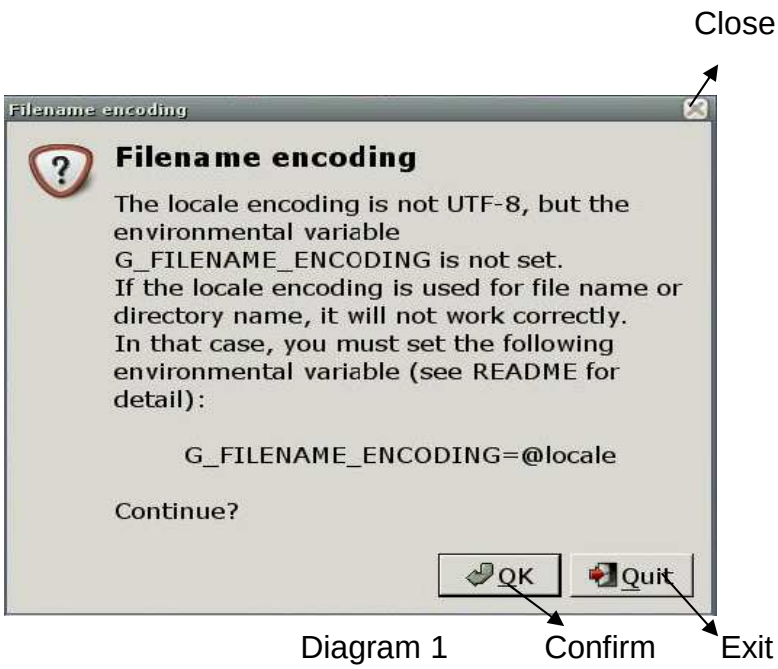
（2）、Using Email Box

Email Box is a customer's send/Receive mail manager. It is simple and easy to operate and similar to similar to most popular email programs. It is very easy to operate this Email Box.

We recommend you get someone experienced to set this up for you. Setting are server provider dependant, and usually available from your service provider or their website.

1、Double Click the Email Box on the Desktop as shown in Diagram 1.



Close
Filename encoding
Filename encoding
The locale encoding is not UTF-8, but the environmental variable G_FILENAME_ENCODING is not set.
If the locale encoding is used for file name or directory name, it will not work correctly.
In that case, you must set the following environmental variable (see README for detail):
G_FILENAME_ENCODING=@locale
Continue?
OK
Quit
Confirm
Exit

Diagram 1

The screen will only pop out when first opens the Email Box. Click 
on the screen to enter Email Box as shown in diagram 2. click

to exit Email Box.

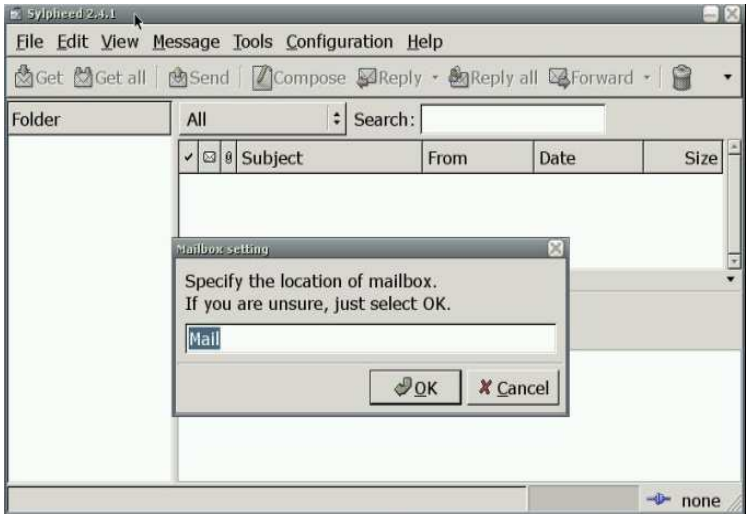


Diagram 2

Click 
to enter account setting screen as shown in Diagram 3.

Fill in the personal account setting according to the screen options below. There are multiple tabs, please select the appropriate one accordingly. (REMEMBER THE SETTING VARY DEPENDING ON YOUR SERVER)

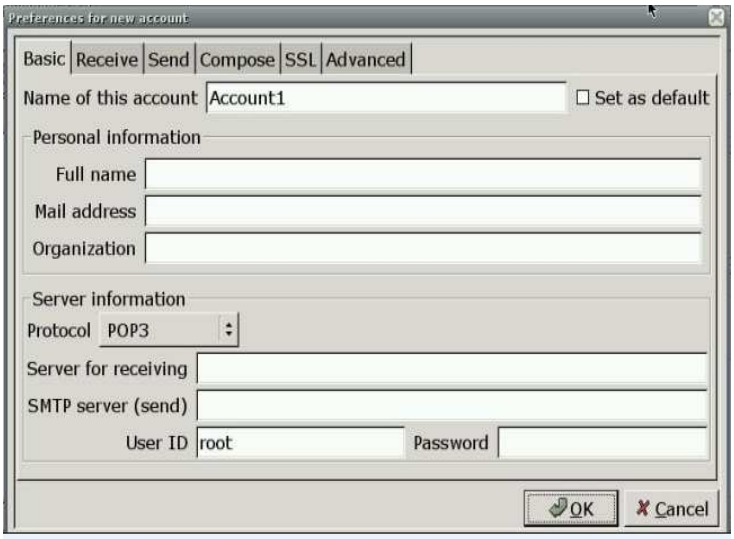

Diagram 3

2、Basic Tab :

Use the account DJlhp@163.com as example for settings (this is just for demonstration, you must input your actual information):

Notes:

(User needs to set mail box, to allow Mail Box to manage the email address)

Protocol： **POP3 (According to user setting mail box, can be IMAP 4 also)**

Server for receiving: pop.163.com **(input your incoming server and SMTP server information.**)

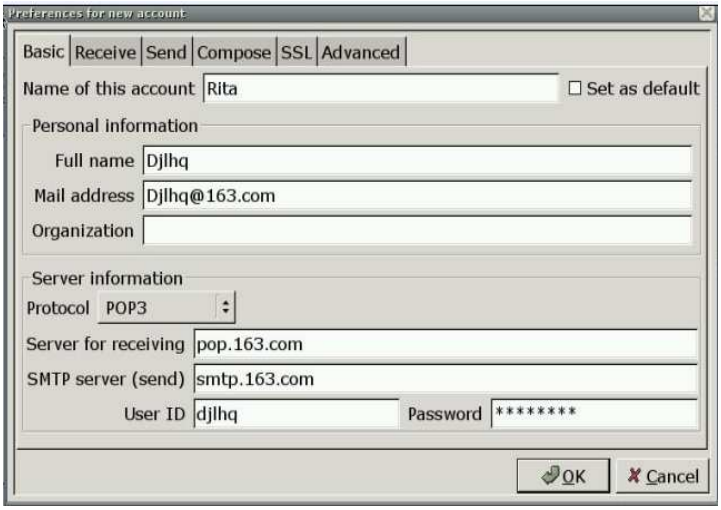

Diagram 4

② 、Receive Tab:

Select “Filter message on receiving” (user can select when necessary)

Default inbox - inbox (Default receiving mail box is usually “inbox”, you can change it)

Select “Get all’ checks for new messages on this account"

Diagram 5

③、Send Tab:

Select SMTP Authentication (SMTP AUTH) (this option is usually selected)

Authentication method: Automatic

User ID: djlhq Password: ******

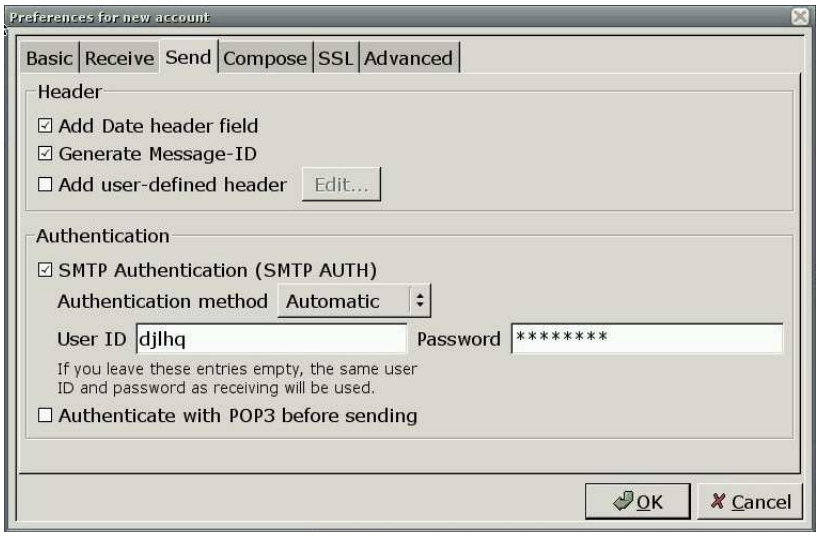

Diagram 6

④、Compose Tab:

Direct input: djlhq@163.com

User can select to use cc, Bcc, Reply-To based on user needs.

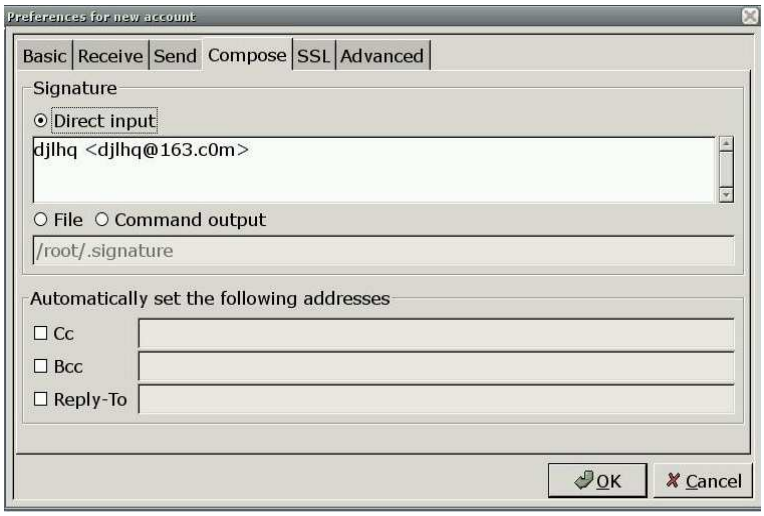

Diagram 7

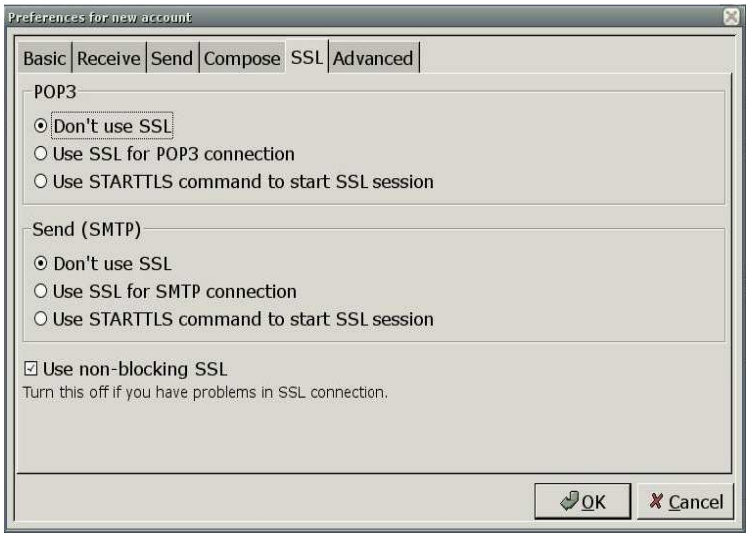
⑤、 SSL Tab :

For POP3 select “Don’t use SSL”

SMTP select “Don’t use SSL”



Advanced” option page (Diagram 9):

Select “Specify SMTP Port:**25”** (163 mailbox use SMTP protocolport25，user can fill in different port no according to the mailbox type)。

Select “Specify POP Port:**110”** （the port of the 163 mailbox pop protocol is 110，user can fill in different port no according to the mailbox type)。

Select “Put sent message in”, then click … button to select the location to save the sent mail, here use “sent folder”。

Select “Put draft message in”, then click … button to select the location to save the draft mail, here use “draft folder”。

Select ”Put queued message in”, then click … button to select the location to save the

queue mail, here use “queue folder”.

Select “Put deleted message in”, the click … button to select the location to save the deleted mail, here use “trash folder”.

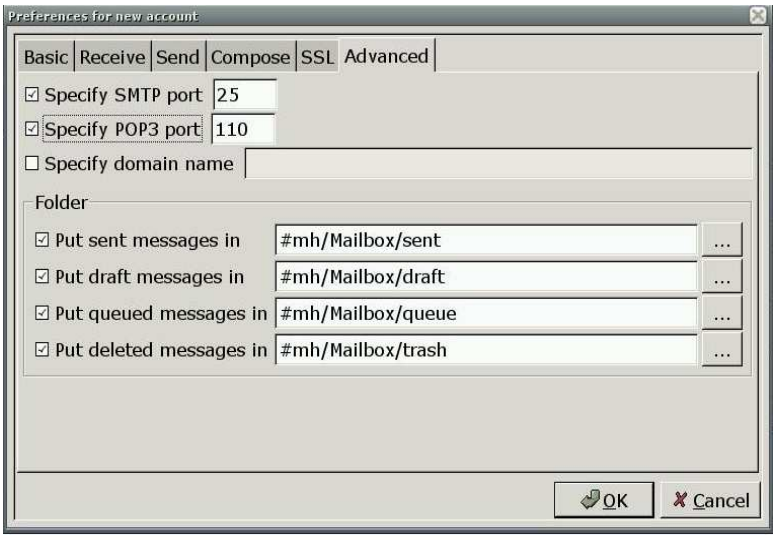


Diagram 9

Now djhk@163.com mailbox setting is completed，click the OK button.

3、Edit account information, as diagram 10:

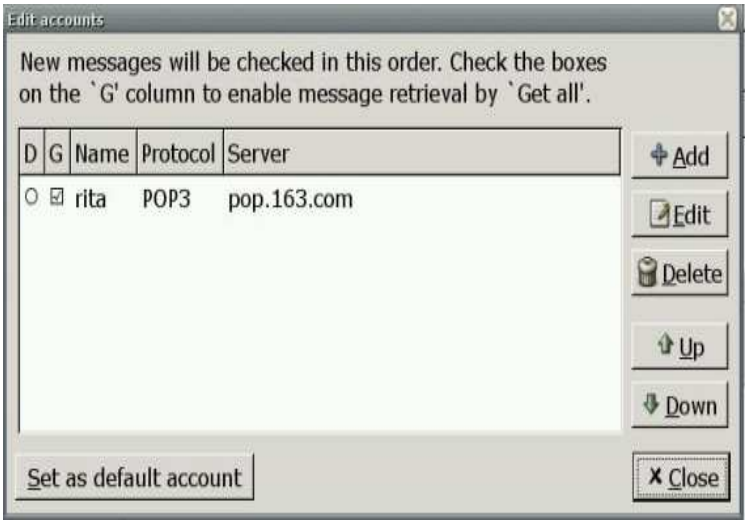

Diagram 10

After steps 1 and 2 are complete, all email “accounts” will be displayed. Click on “Edit accounts” screen，you can add any mail account by clicking Add button， Edit any existing account by clicking Edit，Delete any existing account by clicking Delete button，you can line up the accounts by clicking Up and Down button, you can select any default account by clicking Set as default account。

4、click the Close button in Diagram 10 to enter Email Box main page as in Diagram 11.

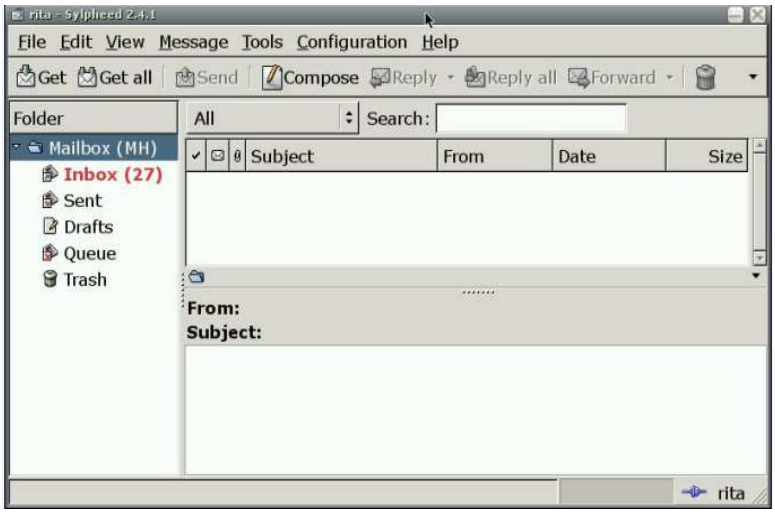

Diagram 11

Click Get or Get all button to accept the mails of the djhq@163.com, as in diagram 12

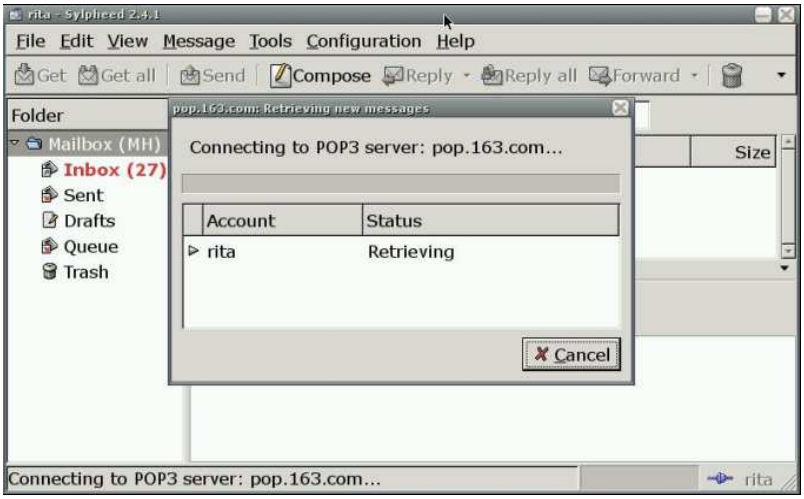

Diagram 12

Click the Cancel button in screen 12 to cancel the operation of receive mail。

For more support, please visit http://www.Email Box.sraoss.jp/ or contact your service provider.

（3）、Using Instant Messenger

Instant Messaging is a new trend of communication tools; it allows multi-party communication while users are online.

1、AIM Pidgin setting

①、Open Pidin

(13)、Paint Brush

Paint Brush is Drawing Board software, user can use this to create simple or pretty drawing, drawing can be black and white or in color. User can also save their drawing in .jpg and .png file to be viewed as a picture. The drawing can also be used as a background or pasted into other documents. User can use “Drawing” to view or edit a picture.

Double click the Paint Brush icon on the desktop, click “Load new image” button, select the file to open as shown in diagram 1:

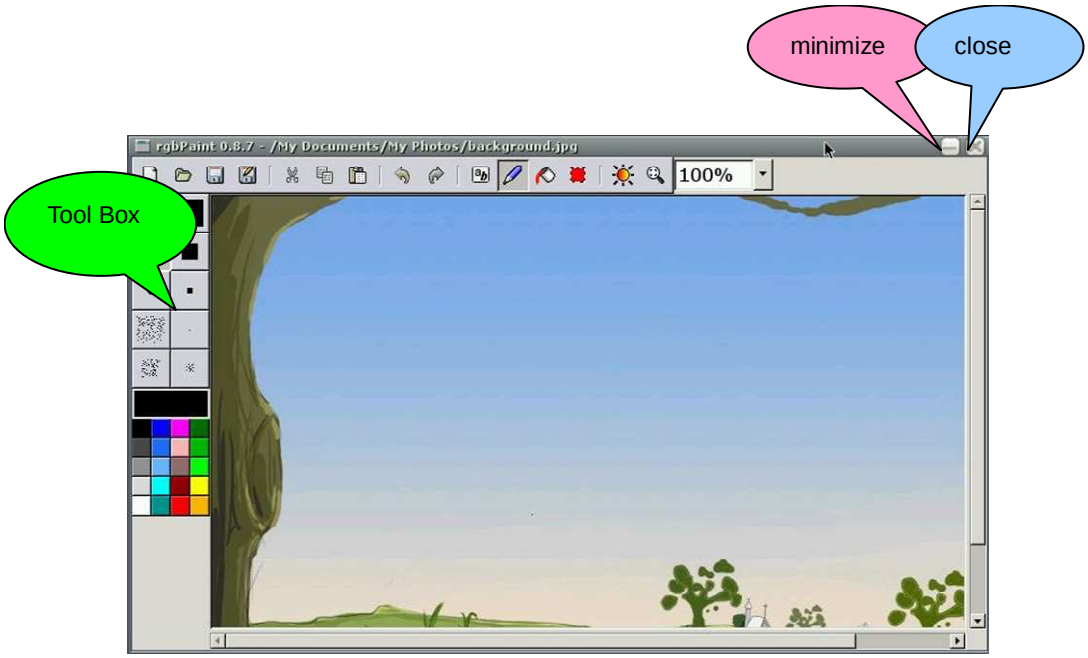

Diagram 1

For more information about Paint Brush, please visit：

http://mtpaint.sourceforge.net/rgbpaint.html.

(14)、Calendar

Calendar is a daily planner and management software.

The functions inclusive of: event management, new event, store event, open event, edit event, delete event, move event, alarm and etc

1、Double click the Calendar icon in the desktop to open the screen as in Diagram 1.

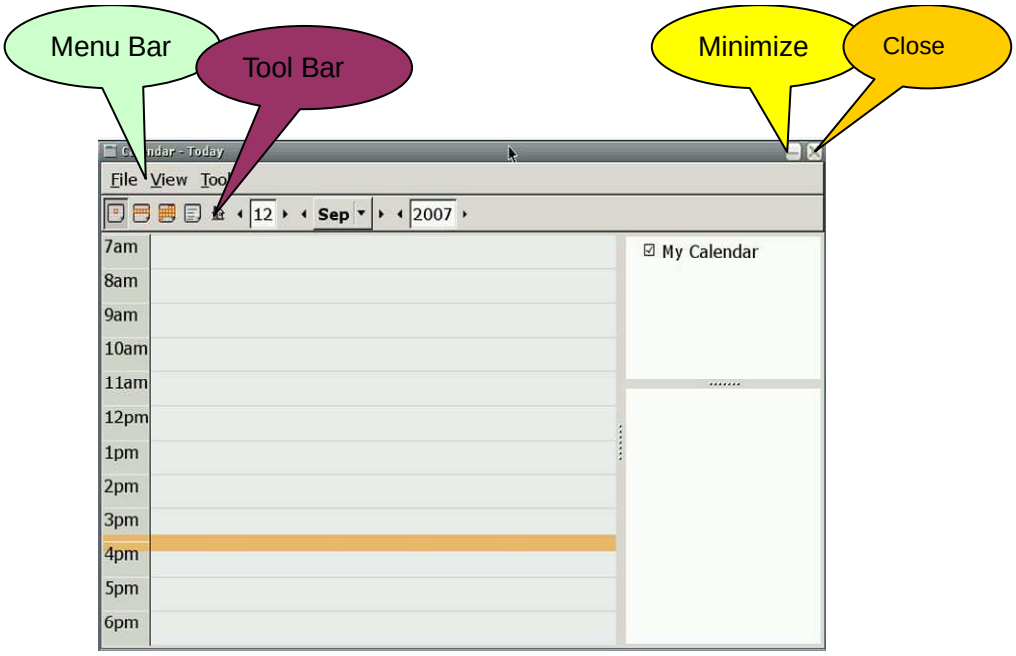

Diagram 1

2、Select file → new option to pop up a dialog box. Enter the corresponding events in the dialog box and click Save to create new event as in diagram 2

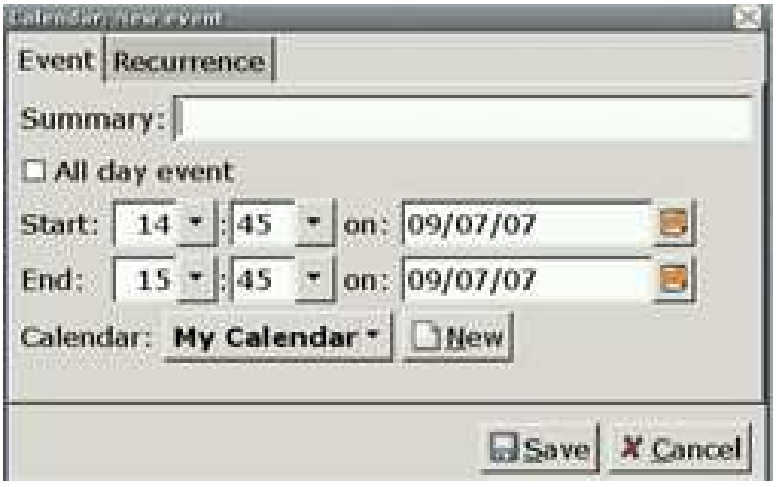

Diagram 2

3、On the event Start 2:45, ends 3:45 right click the mouse to select save option，enter the file name in the pop up dialog box, select save content, click Save button to save the file as shown in diagram 3：

Diagram 3

4、On Start 2:45, ends 3:45 right click the mouse to select edit for editing the event.

5、On Start 2:45, ends 3:45, right click the mouse to select delete，click Delete in the pop up dialog box to delete as shown in diagram 4

Diagram 4

6、Select menu Tools—>Calendars option, a pop up dialog box as shown in diagram 5.

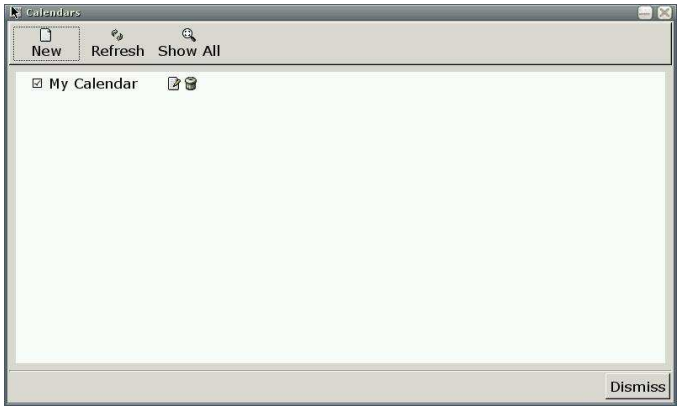

Diagram 5

Click New button for new event type. Enter the corresponding content in the pop up screen, click Save button to save new create event type as shown in diagram 6.

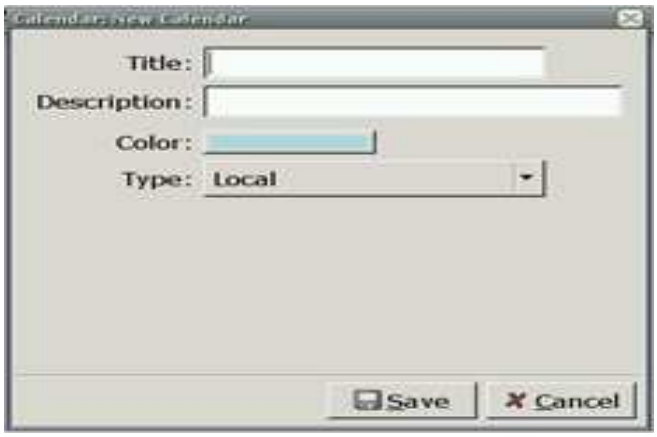

Diagram 6

7、Event type, such as My Calendar，click icon in diagram 6, make change in the pop up dialog box and then click button to save as in diagram 7.

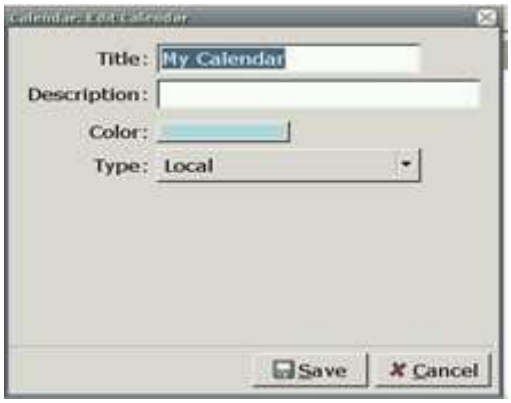

Diagram 7

8、delete event type, such as delete My calendar type, in diagram 6 click icon in , click button in the pop up dialog ox to delete. Click button to cancel delete as in diagram 8

Diagram 8

9、Under the event time display area, click “view” menu and the select , , , button in the toolbox, you can choose the time display.

①、click ，to show today’s event arrangement as shown in diagram 9

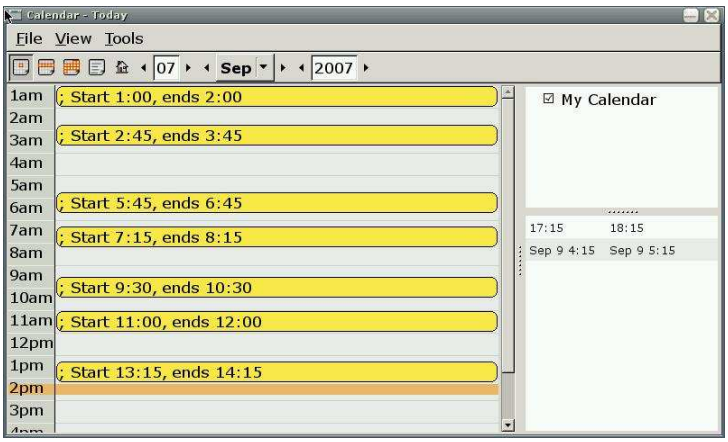

Diagram 9

②、Click to display one week schedule as shown in diagram 10

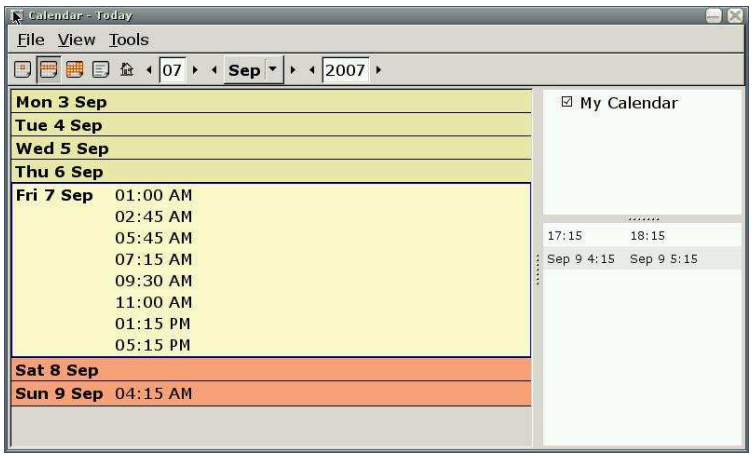

Diagram 10

③、Click to display one month schedule as shown in diagram 11.

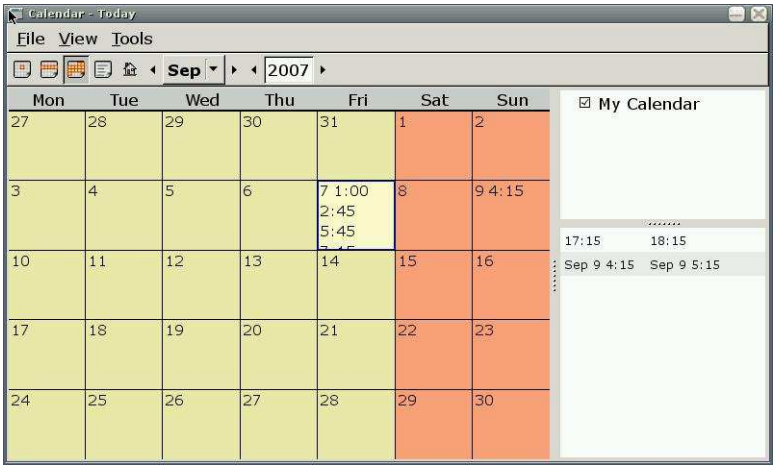

Diagram 11

④、 click to display all the daily schedule as shown in diagram 12

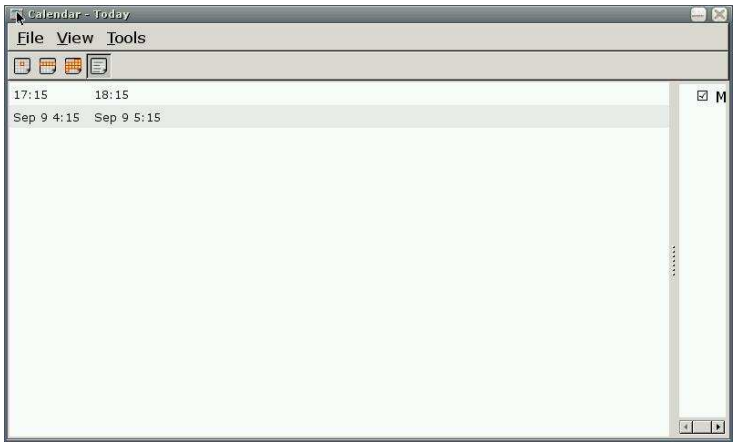

Diagram 12

User should try to use the Calendar to manage their event and schedule.

(15)、File Manager

File Manager is a very quick file management tool, its main function is to store and manage the files under Alpha-400. It has the popular Tabbed browsing function and very user friendly. It also provides two viewing methods: icon viewing and tabular listing. It can also show the file size of the current file.

Below is the simple guide to use the File manager:

1、Double click the “File Manager” icon in the desktop to open the file manager as shown in diagram 1.

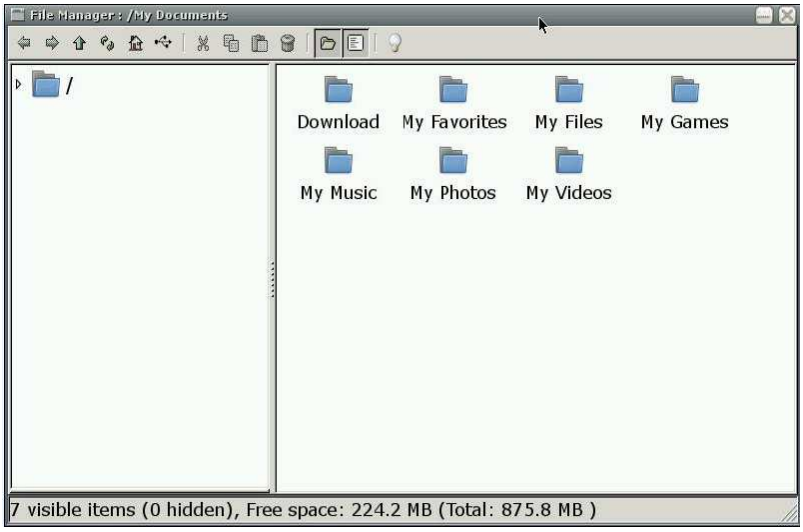

Diagram 1

There are left and right areas. The left area is the system folder listings, and the right side is the folder views, that user can edit, move or rename.

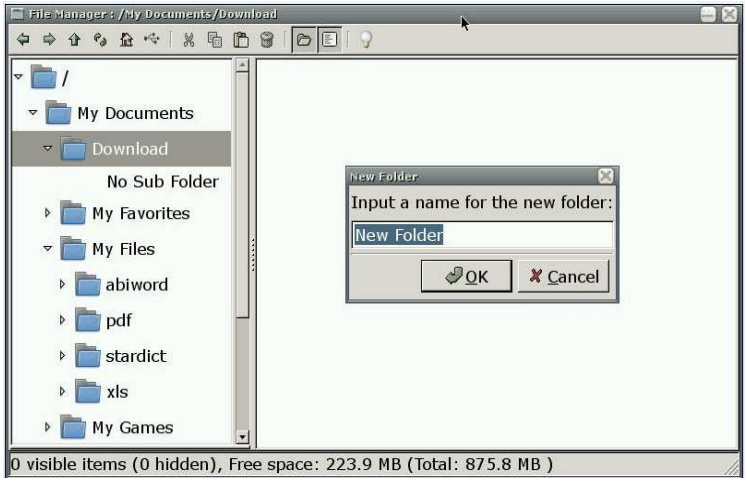

Diagram 5

Enter the file name to the new file name in the dialog box, such as “rita” and click ok button; it will create a folder name “rita” under the current folder.

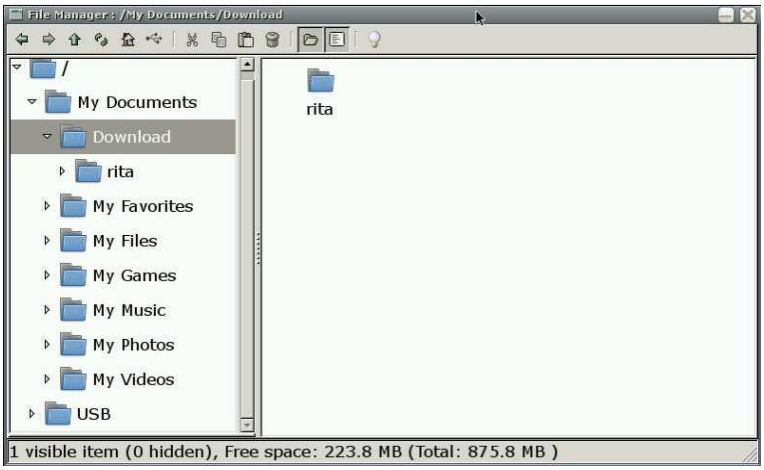

Diagram 6

2、Click to minimize the File Manager, click to close the File Manager

For more information and support on Pcman File Manager, please visit

http://PCmanfm.sourceforge.net/

(16)、Network dial-up

(Optional depending on optional hardware)

1、ADSL dial up setting

①、Double click the Network Dial-up icon in the desktop to open the dial up setting screen as shown in diagram 1

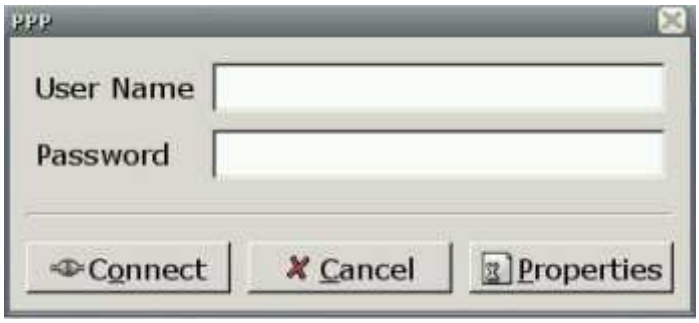

Diagram 1

②、Click the Properties button in diagram 1, enter Advanced setting screen as shown in diagram 2.

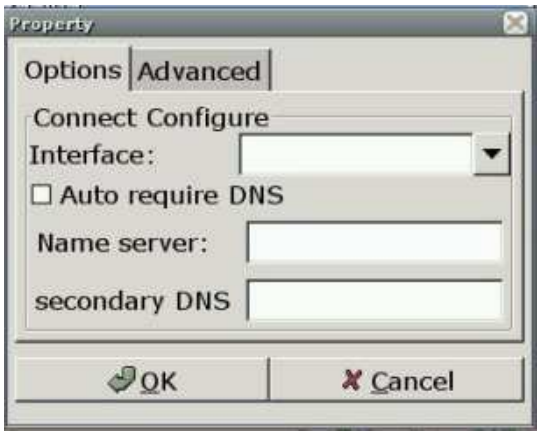

Diagram 2

Fill in the necessary data in the screen and click ok to go back to the previous screen. If everything is set up, click Properties button to start the dial up connection. During the connection process, user can click Properties button to stop the connection.

2、**Wireless Dial-up facility**

3、CDMA dial-up facility

Double click the Mobile Line icon on the desktop to open the wireless dial-up screen as shown in diagram 3

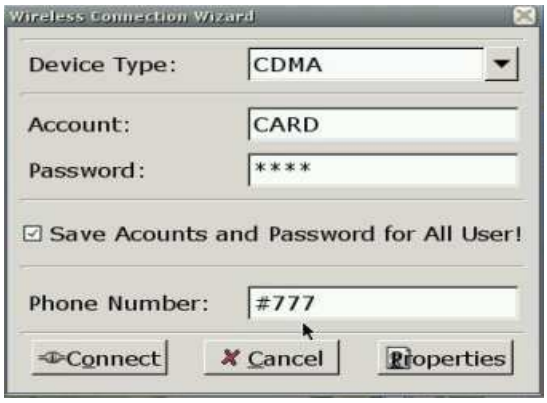

Diagram 3

User should enter the correct information to the options in diagram3

Click Properties button on screen 3 to go into Advanced setting screen as shown in diagram 4

Diagram 4

User should fill in the correct information, then click ok to go back to the previous screen. Then click Connect button to connect, during the process you can click Cancel button to cancel the connection.

4、GPRS Facility

Double click the Mobile link icon on the desktop to open the wireless dial-up screen as shown in diagram 5. On the Device type, click GPRS.

Diagram 5

User should enter the correct information to the options in diagram 5

Click Properties button on screen 5 to go into Advanced setting screen as shown in diagram 8

Diagram 6

User should fill in the correct information, then click ok to go back to the previous screen. Then click Connect button to connect, during the process can click Cancel button to cancel the connection.

(17)、Control panel

Control Panel allows user to set up the system time, date, network and volume setting of the Alpha-400

First click Control Panel icon on the desktop as shown in diagram 1

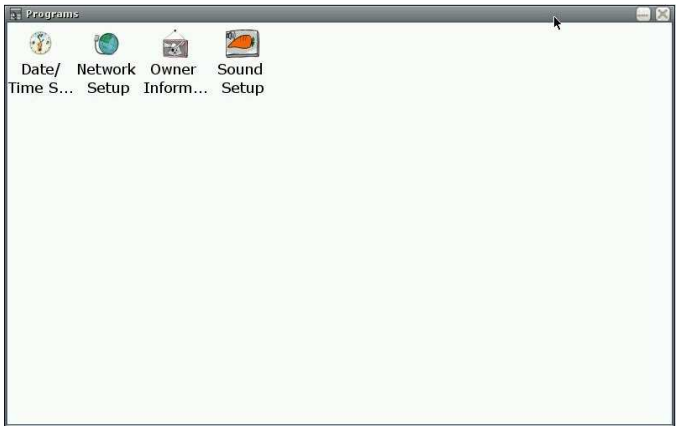

Diagram 1

1、Double click Date/Time icon to open the date and time setting screen as shown in diagram 2

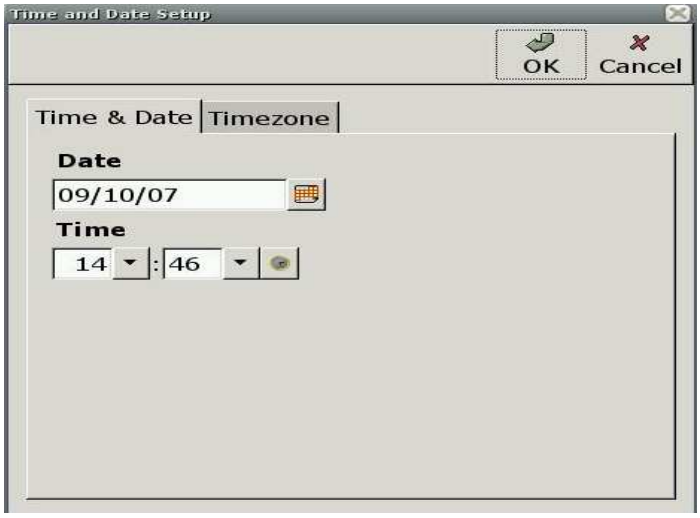

Diagram 2

Enter the data and time information, such as 09/10/2007 for date and time is 14:47.

2、Double click Network setup to open the network setting screen as shown in diagram 3 (1) and (2).

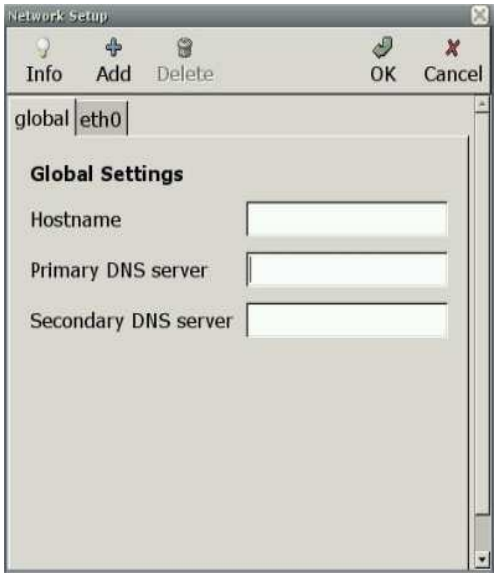

Diagram 3 (1)

Diagram 3 (2)

If you set up your network in standard procedure, you can use dhcp (automatic IP) or static IP to connect.

Below discuss on the DHCP server option

Select DHCP Server option，click

button to set up the corresponding facility.

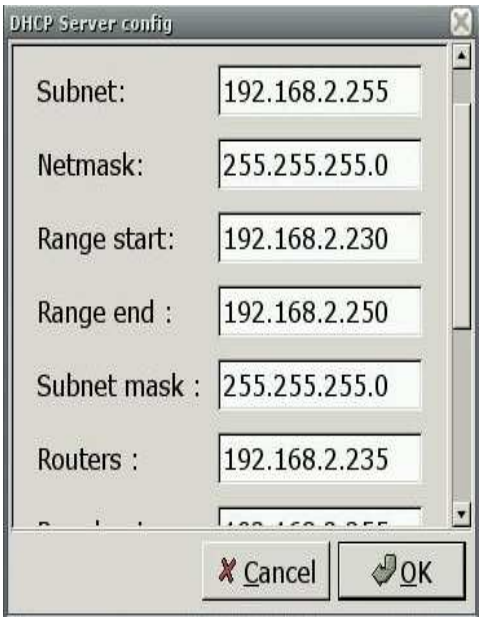

Diagram 4(1)

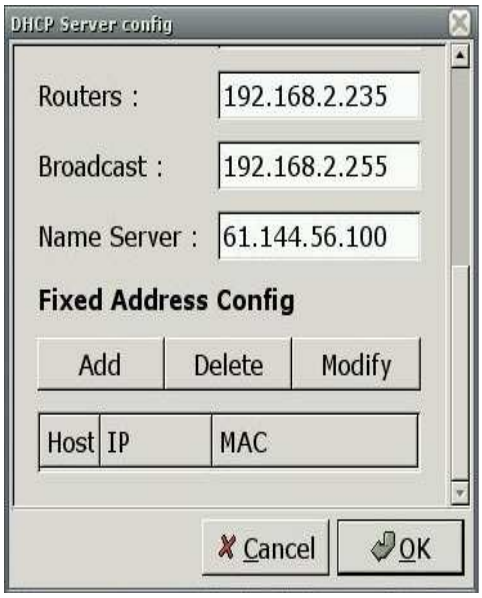

Diagram 4(2)

After the above steps, the DHCP can start now. User should confirm the DHCP Server has started by checking the DHCP option is already select, if there is tick on it that means the DHCP starts operating. You can assign IP to the same network.

3、Double click icon to open the user information set up screen as in diagram 5.

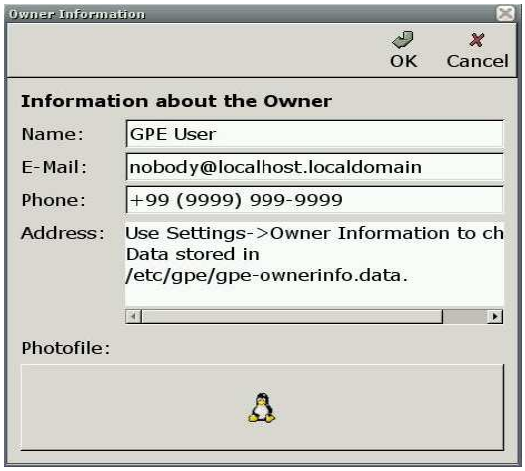

Diagram 5

User can enter their own information as their liking. Here we use user Rita as an example to set up the information as shown in diagram 6.

Diagram 6

4、Double click Sound Setup icon to open the sound set up facility screen in diagram 7.

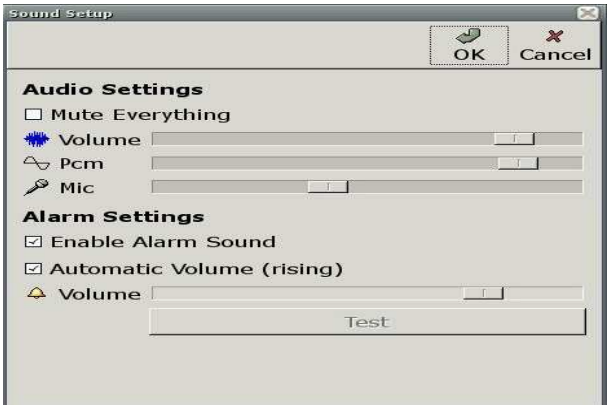

Diagram 7

For Software support please refer to the relevant online links provided with each application.
